Why we use VCS?

→ History
→ Team work

Git Remote { Cloud ⇒ Git Repository hosting websites.
(GitHub | Bitbucket | Gitlab...)

⇒ Git Remote.

→ Cloud location on which we can host our git repositories.

→ location from which we can download the codebase in our m/c.

GITMOB.

git clone.

→ git checkout
remote/origin/f1.

→ git checkout -b
f1.

remotes/origin/x42.

GIT HUB.

git clone.

Read Only

- 1) git fetch
- 2) git merge.

Git history gets messed up if we use merge.

Merge \Rightarrow Rebase + Merge

$\left. \begin{array}{l} \text{git fetch} \\ \text{git merge} \end{array} \right\} \Rightarrow \text{git pull}$

GITHUB.

git clone.

① git fetch

② Rebase.

③ Merge.

git pull -- rebase

A pull request is a proposal to merge a set of changes from one branch into another. In a pull request, collaborators can review and discuss the proposed set of changes before they integrate the changes into the main codebase.

How to contribute our code on GitHub.

By default we will not have the access of github repository provided by others.

⇒ Only read access.

① How to create our own github repo.

② How to do the code changes in others github repo.
